In the 2022 Global Hunger Index, Algeria ranks 32nd out of the 121 countries with sufficient data to calculate 2022 GHI scores. With a score of 6.9, Algeria has a level of hunger that is low.

For more information please see the 2022 Global Hunger Index at www.globalhungerindex.org

Publication date: October 2022
The Global Hunger Index (GHI) is a tool for comprehensively measuring and tracking hunger at global, regional, and national levels. GHI scores are based on the values of four component indicators:

- **Undernourishment**: the share of the population with insufficient caloric intake.
- **Child wasting**: the share of children under age five who have low weight for their height, reflecting acute undernutrition.
- **Child stunting**: the share of children under age five who have low height for their age, reflecting chronic undernutrition.
- **Child mortality**: the share of children who die before their fifth birthday, partly reflecting the fatal mix of inadequate nutrition and unhealthy environments.

These four indicators are aggregated as follows:

\[
\text{GHI Score} = \frac{1}{3} \text{Undernourishment} + \frac{1}{6} \text{Child stunting} + \frac{1}{6} \text{Child wasting} + \frac{1}{3} \text{Child mortality}
\]

*Note: All indicator values are standardized.*
