In the 2022 Global Hunger Index, Turkey is one of 17 countries with a GHI score of less than 5. These countries are not assigned individual ranks, but rather are collectively ranked 1–17 out of 121 qualifying countries.
The Global Hunger Index (GHI) is a tool for comprehensively measuring and tracking hunger at global, regional, and national levels. GHI scores are based on the values of four component indicators:

- **Undernourishment**: the share of the population with insufficient caloric intake.
- **Child wasting**: the share of children under age five who have low weight for their height, reflecting acute undernutrition.
- **Child stunting**: the share of children under age five who have low height for their age, reflecting chronic undernutrition.
- **Child mortality**: the share of children who die before their fifth birthday, partly reflecting the fatal mix of inadequate nutrition and unhealthy environments.

These four indicators are aggregated as follows:

\[
\frac{1}{3} \text{ Undernourishment} + \frac{1}{6} \text{ Child stunting} + \frac{1}{6} \text{ Child wasting} + \frac{1}{3} \text{ Child mortality} = \text{GHI Score}
\]

**Note**: All indicator values are standardized.

**Global Hunger Index 2022**: Türkiye

**Trend for Indicator Values - Türkiye**

- Proportion of undernourished in the population
- Prevalence of wasting in children
- Prevalence of stunting in children under five years
- Under-five mortality rate
